Advanced Window Films

Bonwyke Window Films
can help reduce up to

78%

of the sun's heat
coming through
your windows

Introduction

Bonwyke window films is a manufacturing leader in designing solar window films. Our product provides outstanding levels of energy efficiency to help you live a cool and comfortable life style, while keeping carbon emissions low.

Bonwyke was set up in the United Kingdom in 1980, and it quickly became a market leader in solar films - known for its quality service and reliability. Today, Bonwyke is acknowledged by industry experts as a top quality product. We guarantee energy conservation, heat rejection, UV protection, glare reduction, and furnishing protection, as benefits of our products.

We are experts in:

Energy conservation

Heat rejection

UV protection

Glare reduction

Bonwyke operates extensively across Europe, the Nordics, and Asia - with a vast selection of films available to satisfy customer needs. Films are backed by the best certification and warranties in the industry.

About Window Film

Window film is a self adhesive polyester film that is applied to glass surface. As solar radiation passes through the glass, the film acts as a 'sunscreen' to block harmful UV rays, as well as to regulate the level of heat and light passing through the glass. High quality films block up to 70% of solar heat, reduce glare by 83%, and block 99% of UV rays. They also reduce heat loss in the winter.

Applying window films in your home and workplace will block UV rays, help protect your skin, furniture, and objects from accumulate sun damage.

Your lifestyle will be more comfortable when your space is protected from the heat of the sun's rays.

Cut your energy bill by up to 40%

Often-times, energy efficiency professionals will prioritise upgrades such as lighting and HVAC controls, the provide a speedy ROI. However, buildings can benefit from the effective and economic solutions of Bonwyke window films.

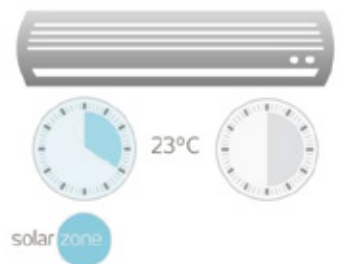

2 Year Payback
